

Enriched Water: Sheep

50% Hydrogen Peroxide with Stabilizer and Sequestrants

Cost of using Enriched Water Peroxide Solution

- 25 ppm = 1 cent per 40 gallons of treated water
- 50 ppm = 1 cent per 20 gallons of treated water
- 100 ppm = 1 cent per 10 gallons of treated water

	Water Consumed @ 100ppm	Cost	
Sheep	2 gallons		

There are many sources of water contaminants, such as nasal discharge from animals containing bacteria or feed dropped into water reservoir that if left unattended may develop anaerobic (bad) bacteria. Those bacteria can end up in the water tanks, passing it on to other animals.

With Enriched Water Hydrogen Peroxide solution, bad water will be fixed, leading to increased water and feed consumption which in turn will result in greater weight gains. Occurrences of bacteria, infections and diseases will be reduced, resulting in healthier animals and less need for antibiotics and medication. As your herd drinks the cleaner and healthier water you will see health benefits from that alone.

$$[\text{Increased production}] - [\text{reduced expenses}] = \text{increased profits}$$

Sheep Producers using Enriched Water have noted the following benefits:

- cleaner water
- increased consumption of water and feed
- improved digestion (feed conversion) and weight gain
- improved overall animal health
- strengthened immune systems
- improved Lambing & lamb health

Enriched Water increases the following production

- Beneficial weight gains**
 - Increases weight gains through improved digestion and increased feed consumption and conversion
 - Oxygenated water stimulates weight gains to muscles
- General health**
 - Reduced infections & diseases such as:
 - o internal parasites
 - o respiratory problems
 - o mastitis
- Improved lambing & lamb health**
 - The ewes will be drinking more so they will have ample milk to feed lambs
 - When the lambs are sucking from the ewe they receive benefits of the peroxide through the milk
 - You can expect to have healthy good sized lambs
 - The lambs will have a resistance to coccidiosis (scours)

Enriched Water reduces the following expenses

- Water distribution system maintenance**
 - Prevents water flow rate reduction due to build-up
 - Increases system lifespan by inhibiting corrosion
- Medical and veterinarian intervention**
 - Improving animal general health through:
 - o boosting animal immune systems
 - o increasing water consumption to assist in flushing toxins from the body
 - Removing bacteria, contaminants and reducing water borne disease from the water
 - The ewes will be in better health, reducing complications during lambing
- Feed**
 - Improves digestion and feed conversion to enable faster weight gains requiring less time before being ready for market
- Death loss from health complications**
